

Module 2 – Master Time Cycles, Segments of the Markets

Get to know the market you are trading.

Module 2 calculates Statistics which show the Trader this Market's past performance.

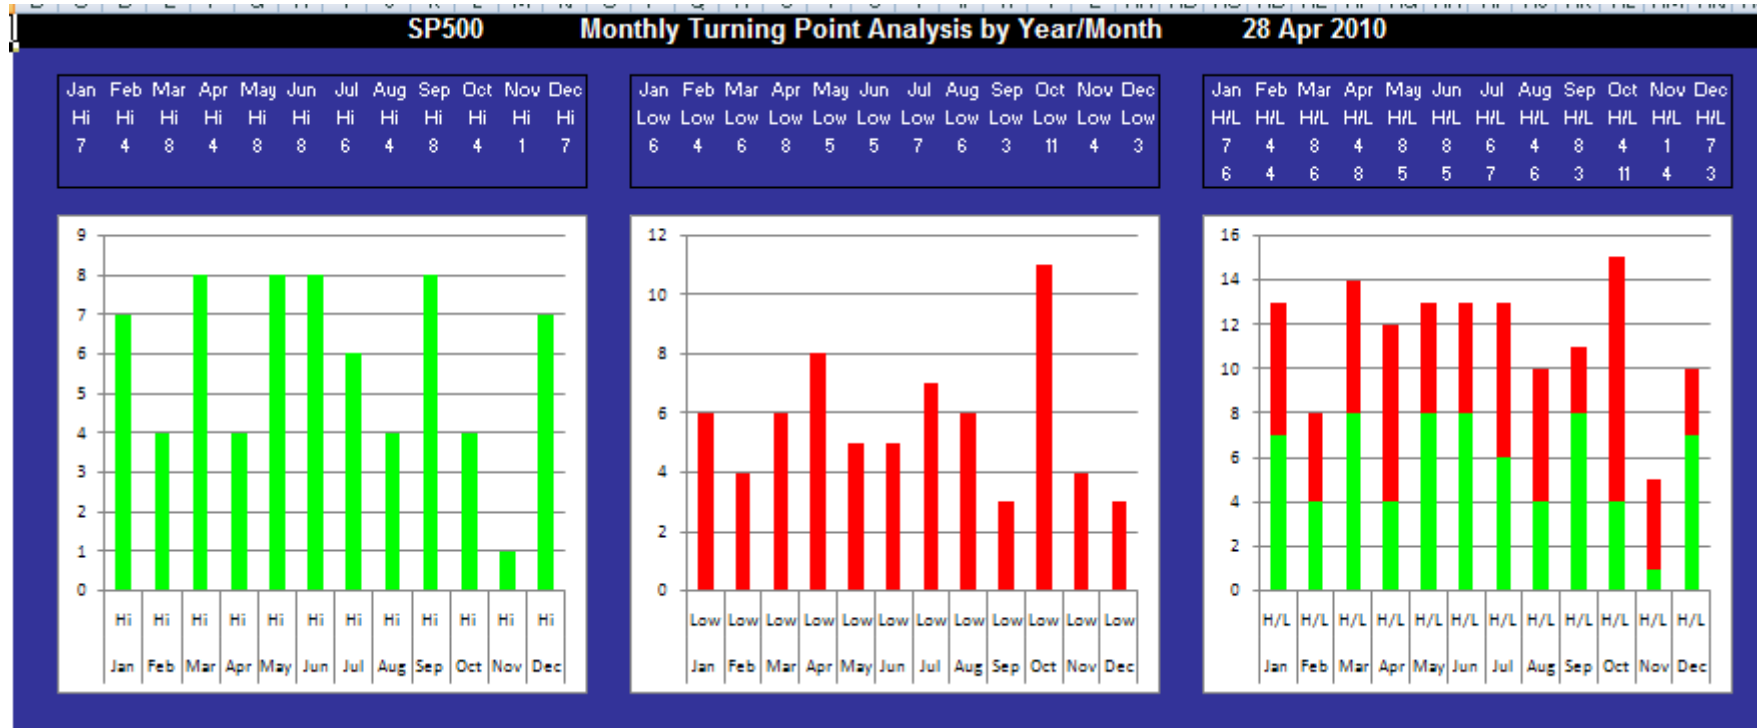

Module 2 also provides the Trader with the functionality to Chart and Compare Segments of the Market. These can be based on an annual repeating event (such as public holidays, Gann's seasonal dates, Tax lodgements), or can be an extract of All Swing Tops or All Swing Bottoms, or special events – such as Interest Rate movements. Extracting segments of the Market shows how the market typically trades into or out of an event. W.D. Gann taught that time repeats - this functionality identifies repeating segments of the market.

Module 2 covers the following functionality:

- Monthly Swing Statistics – See the most frequent months when Tops and Bottoms are made
- Monthly Open/Close Statistics – See the relationship between a Open and Close and the previous bar close
- Day of Month Statistics – See swing activity by day of month across all months
- Day of Year Statistics – See swing activity by day of month across all years
- Statistics on Swing Ranges – Extract Time and Price Statistics between Swings
- Bar Ranges Statistics – Analyse bar movements (Hi/Low of a bar) for Daily, Weekly, Monthly, Quarterly and Annual Charts
- Market Segments – Compare Segments of the Market. Traders can specify number of bars leading into a target date and the number of bars trading out of the target date. GATE makes it very easy to compare annual events, Swing Tops or Bottoms, or any specific dates.

GATE (GANN Analysis Through Excel)

Get to Know Your Market – Statistics –

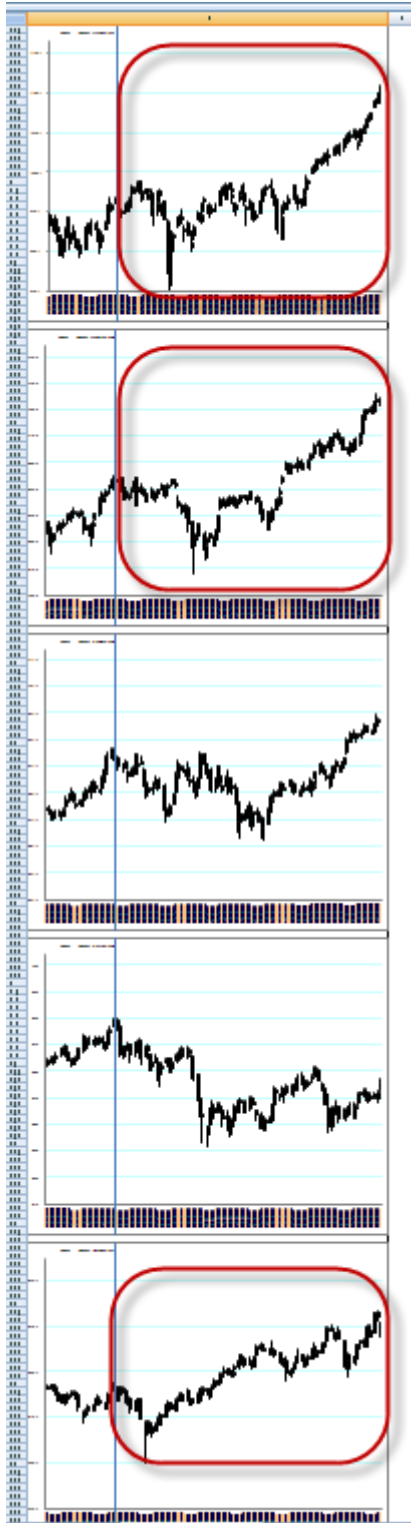

GATE (GANN Analysis Through Excel)

Segments of the Market – Easy to Use Menu – Select Swings, Public Holidays, Any Dates

Select – Study Trading INTO a Target Date or Trading OUT of a Target Date

Extract ANY Segment – and Look for Repeating Patterns – Example using SP 500

GATE (GANN Analysis Through Excel)

Extract Segments of the Market – At Major Lows – Study how Market Trades Out of a Low

Each Chart Fits exactly of an A4 Landscape Page
